DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed May 27th 2008 has been received and made of record.
2. Applicant has amended claims 1, 7, 10, 14 and 18. New claims 27-32 have been added. Claims 2, 4, 12, 16 and 20-26 have been cancelled. Claims 1, 3, 5-11, 13-15, 17-19 and 27-32 are now pending.
3. Applicant has amended the independent claims to include previously indicated allowable subject matter. All claims are now in condition for allowance.
4. An Examiner's Amendment is presented below. The amendment was necessitated by the fact that claim 14 and claim 18 as amended recited identical language. It was determined in a phone interview that Applicant meant to include the subject matter of claim 7 in dependent claim 18 in order to place claim 18 into independent form. The amendment is described below.

Examiner's Amendment

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian K. Dutton, Reg. No. 47,255 on July 2nd 2008.

The following language of claim 18:

"An image device for a digital image, characterized by comprising an FIR digital filter using as an interpolation function a function obtained by composing a function based on a cubic convolution method and a function based on a bilinear method for an interpolation signal between discrete original pixels used for calculating an output pixel value,

wherein said FIR filter uses as an interpolation function an function that is obtained by composing a part of the function based on the cubic convolution method and a part of the function based on the bilinear method and is asymmetric with respect to the right and left"

should be replaced with the following language found in claim 7:

"An electronics apparatus for a digital image, characterized by comprising an FIR digital filter using as a function a right-and-left asymmetrical interpolating function obtained by composing a function based on a part of a cubic convolution method and a part of a bilinear method for an interpolation signal between discrete original pixels for calculating an output pixel"
